# aHa! XLS Importer

Use Excel to get data from your peers and transform them to mindmaps

Product description

The aHa!XLS importer allows you to import Microsoft Excel data into Mindjet MindManager, converting the rows, columns and cell data, such as comments, in to a structured map.

For all MindManager users who want to use Excel for project and resource planning

This product is designed for all MindManager users who work with Excel or whose co-workers work with Excel and quickly want to generate a mindmap from their Excle sheet.

> *"I am planning a lot of small projects with each time different team members. First I send my project leaders / peers an Excel template which they fill in with their data. Second I generate mindmaps. Third I generate a Team Dashboard using the Visual Web export and a Gantt Chart using the 2Way and using the aHa!2Way"*
>
> *Mathieu van der Wal – Manager add-in development and Lead Programmer aHa!Web.*
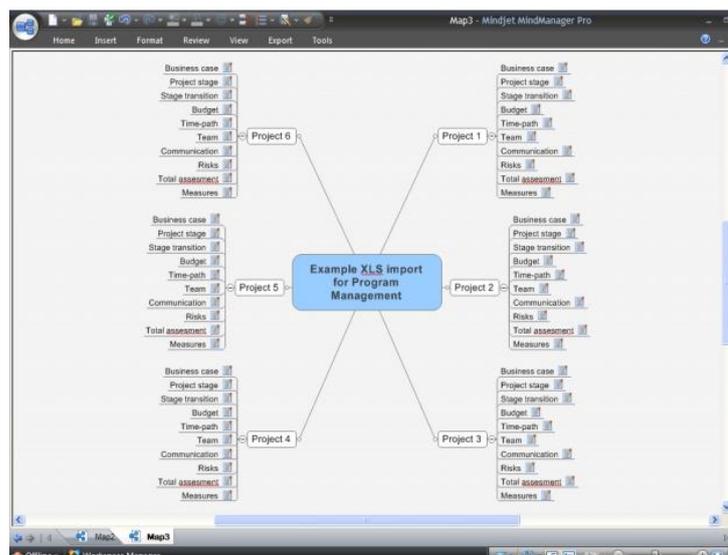

How does it work?

Check the examples below to see if your existing sheets fit the structure the aHa!XLS importer add-in ask in order to be able to transform your sheet into a mindmap.

Automatically generate a mindmap in Mindjet MindManager when you open your Microsoft® Excel sheet in MindManager. Please note that the structure of your Excel sheets determines the lay out of your mindmap.

This mindmap follows the structure of your Excel sheet:

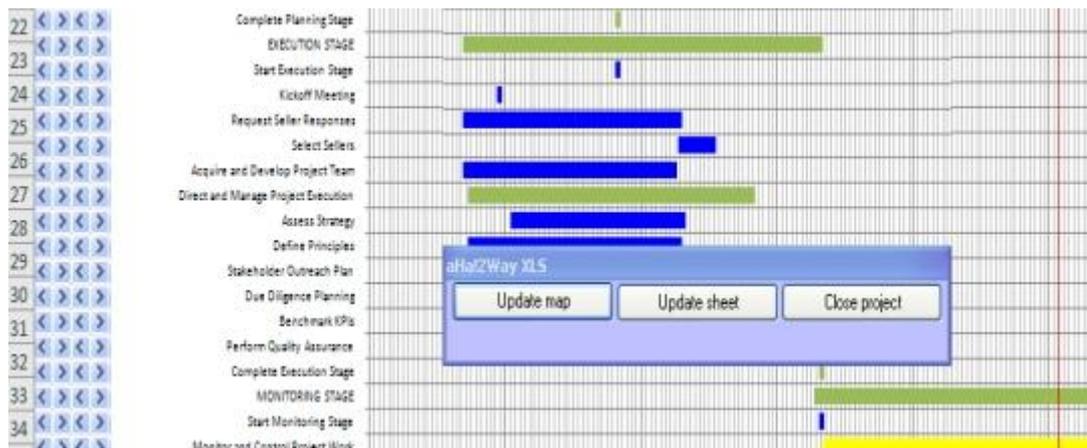

After importing the Excel sheet and generating a mindmap you can use another add-in to generate a matrix:

And/or a Gantt chart:

Please note:
This add-in is only compatible with the PC-version of MindManager 6, 7, 8 and 9
